

ROHTAS STY PACK INDIA PVT LTD

Manufacture Of :
Thermocol (eps) Blocks, Moulding Sheets,
Pipe Section, Foaming (Weeds), PUF Sheets and Pipe Section

Work :
C-35,36 Phase III, UPSIDC Industrial Area,
M.G.Road Hapur (U.P.) 2011015

Regd. Office :
SE-444, Shastri Nagar , Near Shiv Mandir
Ghaziabad (U.P.) 201002

+91 98715 31365, +91 98104 31365

Thermocol Block

The Thermocol blocks are used at large scale in various construction methods. The increasing demands of these materials are due to their effective insulation, landfilling, void landscaping etc. properties. They are more of liberty than limitations as they trail over the concrete materials. Moreover, the concrete blocks are expensive and difficult to move. With **ROHTAS STY PACK INDIA PVT. LTD.**, you will get reliable and trusted thermocol blocks for construction projects.

Thermocol Sheet

"Thermocol sheets have exceptional thermal insulation properties, making them ideal for temperature-sensitive protection. Additionally, these sheets are durable and moisture-resistant, ensuring long-lasting performance even in challenging environments. With customization options available, our Thermocol sheets can be tailored to meet specific project requirements. These sheets feature closed-cell structures that trap air, effectively preventing the transfer of heat. As a result, they help maintain desired temperatures and contribute to energy efficiency.

The lightweight composition of Thermocol sheets ensures easy handling and transportation, making them a cost-effective solution for packaging delicate items and optimizing construction projects. Moreover, their durability and resistance to moisture ensure long-lasting performance, even in challenging environmental conditions."

Thermocol Pipe Insulation

In building construction, no matter what design of the roof it is the most vulnerable part of the building to the absorption of solar radiation particularly in tropical countries like India. Even more, thermocol will play a significant role in providing thermal protection for the roof to fulfill its protective function.

Get Thermocol Pipe Sections for insulation of any pipe as per diameter and insulation thickness as per requirements. Buy Thermocol Pipe Sections for cold and heat insulation for liquids.

Thermocol Weeds

These EPS micro beads are extensively used for filling cushions, mattresses, bean bags and other similar things. The products undergo quality checks at various levels of production and are then dispatched to the customers in proper packaging.

Thermocol Molding

We create thermocol hand molding items as per the customer requirements by using the scooping technique. We create different types of molds made by scooping for packaging and artistic purposes. Hence, we have achieved the fineness and high quality control to assure desired product quality. We provide Thermocol Hand Molding boxes as per your requirements at the best price in India.

Thermocol molding finds its applications in a number of industrial and packaging processes. We create customized thermocol molding to suit your business requirements.

With **ROHTAS STY PACK INDIA PVT. LTD.**, you don't have to look further, we help you in achieving your business goals by providing the high quality thermocol molding. Our expertise in creating customized thermocol molding is what makes us different from our competitors.

PUF Slab

Depending on the size and use of cold room, cold room can be broadly classified as Walk In Cold Room and Warehouse Cold Storages. Walk In Cold Rooms are smaller in size compared to large warehouse cold stores. Due to small size of rooms, insulated floors are built strong enough to allow use of hand carts. These rooms are used in super markets, hotels, supply chains etc.

For quick freezing and chilling application, Blast Freezers and Blast Chillers are used where temperature of the room drops below -40 Degree Celsius from room temperature in span of few hours.

PUF Sheet

Walk In Cold Rooms are smaller in size compared to large warehouse cold stores. Due to small size of rooms, insulated floors are built strong enough to allow use of hand carts. These rooms are used in super markets, hotels, supply chains etc.

For quick freezing and chilling application, Blast Freezers and Blast Chillers are used where temperature of the room drops below -40 Degree Celsius from room temperature in span of few hours.

PUF Support

Polyurethane foam is one of the major components of pre-insulated pipe supports manufactured at **ROHTAS STY PACK INDIA PVT. LTD.** Polyurethane is different from most plastic materials in that it can be tailored to meet various load requirements of varying applications. Old techniques of wooden pipe support for the erection of plant & pipe lines are now replaced by PUF / PIR Pipe Support. RSPPL offers a wide range of PUF / PIR Supports. Normally the density range of PUF / PIR Support is 100 kg/m³ to 350 kg/m³.

RSPPL offers the PUF / PIR Saddles as per requirement of clients in terms of design.

Insulated pipe supports are designed to prevent direct heat transfer between pipes and their supports. Thus, they reduce heat loss due to conduction at each support.

PUF Pipe Section

Pipe section is defined as rolled, molded, or cut shapes made as annular cylinders for the insulation of pipes, available in one or two segments, and occasionally in three or four, suitable for most steel and copper pipes with outside diameters up to approximately 1120mm.
